

EDGARDO ALEJANDRO GALDÁMEZ VELÁSQUEZ

UNITY UI PROGRAMMER | UNITY C# DEVELOPER

San Salvador, El Salvador | +503 7900-5616 | gardo93g@gmail.com

[LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Unity UI Programmer with 5+ years of professional game-development experience building polished, responsive, and maintainable player-facing systems in Unity and C#. Specialized in uGUI, UI Toolkit, animated screen flows, reusable UI architecture, state-driven interfaces, and integration between UI, gameplay, progression, LiveOps, analytics, and backend data. Experienced in translating Figma designs into production-ready interfaces, optimizing draw calls and memory usage, and debugging live issues across distributed teams. Strong fit for a small studio environment requiring ownership, clear communication, technical flexibility, and close collaboration with designers and artists.

CORE SKILLS

UI Programming: Unity uGUI, UI Toolkit, HUDs, menus, pop-ups, modal screens, navigation flows, responsive layouts, reusable components, visual feedback, transitions

Programming & Architecture: C#, object-oriented programming, event-driven architecture, state machines, modular systems, gameplay-to-UI integration, REST/JSON services

Animation & Content: DOTween, Animator, Addressables, VFX-driven reward flows, sprite atlases, asset lifecycle management, Figma-to-Unity implementation

Performance & Quality: Unity Profiler, memory optimization, rendering optimization, batching, draw-call awareness, Crashlytics, debugging, troubleshooting, production support

Tools & Collaboration: Git, Firebase, Firestore, analytics integration, technical documentation, cross-functional remote development, English and Spanish

PROFESSIONAL EXPERIENCE

Harmony Games | Mobile Game Developer

Apr 2023 - Oct 2025

Remote - United States

Implemented and maintained player-facing interfaces and interactive flows in Unity and C#, including gameplay HUD elements, menus, pop-ups, progression screens, event interfaces, and animated reward presentations.

Built reliable, event-driven UI sequences with DOTween, Addressables, gameplay-state validation, gating, and queue-management logic, preventing overlapping pop-ups, animations, and reward flows.

Connected UI systems to gameplay, progression, daily rewards, seasonal content, Firebase, Firestore, REST APIs, and analytics pipelines for a live mobile free-to-play title.

Improved responsiveness and interaction clarity by refining input handling, timing systems, transitions, visual feedback, and state synchronization across complex player flows.

Established a Figma-to-Unity workflow, documented implementation standards, and supported developers in producing scalable, consistent, and maintainable UI features.

Investigated Crashlytics reports and runtime failures, isolated production defects, and delivered targeted fixes while protecting dependent gameplay and UI systems.

Kubiak LLC | Mobile Game Developer

Dec 2020 - Feb 2023

Remote - United States

Developed Unity UI systems, gameplay flows, state machines, and screen-transition frameworks using C#, uGUI, UI Toolkit, and Animator.

Created reusable interface and gameplay architecture that increased code reuse and accelerated iteration across multiple mobile prototypes and game genres.

Delivered three playable mobile game prototypes in six weeks by translating product requirements into functional gameplay loops, menus, interaction states, and feedback systems.

Removed frame-time spikes on low-end devices through profiling, sprite atlases, batching strategies, rendering optimization, and memory-efficient asset workflows.

Collaborated directly with designers and stakeholders to prototype, test, evaluate, and refine player interactions based on feedback and product goals.

TreeCloud Technologies | Game Developer Intern

Oct 2019 - Jan 2020

El Salvador

Developed interactive gameplay prototypes and simulation tools in Unreal Engine 4 for technical validation and demonstrations. Implemented drone behavior and LiDAR visualization systems while collaborating with multidisciplinary teams on feasibility and iteration.

OFBOX | Junior Software Developer

Oct 2017 - Oct 2019

El Salvador

Optimized legacy software, resolved defects, and improved application performance and stability in production environments. Developed data-extraction and internal integration tools supporting scalable business workflows and system interoperability.

RELEVANT UI ENGINEERING STRENGTHS

Scalable screen architecture: separates presentation, navigation, data, and gameplay state to keep UI systems testable and maintainable as features grow.

Data-driven interfaces: experienced presenting changing progression, reward, event, and backend-driven information clearly and reliably.

UI polish and game feel: uses transitions, timing, VFX, animation, input feedback, and interaction states to make interfaces readable and satisfying.

Performance-aware implementation: considers canvas rebuilds, batching, asset memory, lifecycle management, and profiling when developing UI for constrained hardware.

Cross-disciplinary delivery: comfortable moving from Figma specifications to implementation, iteration, debugging, documentation, and production support.

EDUCATION

Computer Science Degree | Universidad Centroamericana José Simeón Cañas (UCA), El Salvador

ADDITIONAL INFORMATION

Languages: Spanish (native), English (professional working proficiency)
