

Edgardo Alejandro Galdámez Velásquez

Senior Unity Developer

gardo93g@gmail.com | github.com/gardo93g | [LinkedIn](#) | [Portfolio](#)

PROFILE

Senior Unity Developer with extensive experience in mobile F2P game development, specializing in gameplay systems, rapid prototyping, and high-performance UI architecture. Expert in bridging the gap between design and engineering, translating complex game mechanics into fluid, responsive player experiences.

My core expertise includes building scalable gameplay loops, optimizing mobile performance (memory management, draw calls), and integrating LiveOps systems. I combine strong C# engineering skills with a deep understanding of UX and visual polish to deliver production-ready code. Open to relocation.

SKILLS

- **Core Development:** Unity 3D, C#, Gameplay Programming, Rapid Prototyping, Addressables, Git.
- **Mobile Optimization:** Memory Management, Profiling, Draw-call optimization, Sprite Atlases, Batching.
- **LiveOps & Backend:** Integration of REST/JSON, Analytics, Remote Config, Reward/Progression Systems.
- **UI/UX Engineering:** UGUI, UI Toolkit, DOTween, Cinemachine, Responsive Layouts, VFX Hooks.
- **Databases & Tools:** SQL (MySQL, Oracle), Java, Jira, Figma-to-Unity pipelines.

WORK EXPERIENCE

Game Developer

04/2023 – 10/2025

Harmony Games (USA - Remote)

- Engineered core gameplay timings and input logic (Unity C#, DOTween), significantly reducing latency for smoother mechanics.
- Developed complex game flow sequences and reward systems, utilizing Addressables for efficient asset loading.
- Implemented robust gating and queue logic for game events, reducing flow conflicts by 50% and ensuring stability.
- Integrated backend LiveOps systems (REST/JSON) to manage persistent player data, rewards, and analytics tags.
- Established a Figma-to-Unity workflow that accelerated the iteration of gameplay and UX features for the entire team.

Game Developer

12/2020 – 02/2023

Kubiak LLC (USA - Remote)

- Led rapid prototyping of minigames and core mechanics (3 prototypes in 6 weeks), delivering playable internal builds to validate game loops.
- Developed scalable mobile architecture for interaction states and transitions, improving code reusability across projects.
- Executed a major optimization pass for a poker game (profiling, batching), resolving critical frame rate spikes on low-end devices.

Internship

10/2019 – 01/2020

TreeCloud Technologies (El Salvador)

- Prototyped gameplay mechanics in Unreal Engine 4, including physics-based interactions for pinball and memory games.
- Developed simulation systems for real-time drone behavior and LiDAR visualization.

Junior Developer

10/2017 – 10/2019

OFBOX (El Salvador)

- Optimized legacy codebases to improve application performance and stability.
- Designed and implemented scalable data extraction tools and internal integration platforms.

EDUCATION

Computer Science Degree

01/2012 – 12/2020

Universidad Centroamericana José Simeón Cañas (UCA)

Primary and Secondary School

01/1999 – 01/2010

Liceo Salvadoreño

LANGUAGES

- **English:** Business level
- **Deutsch:** Beginner
